PHP Web Developer

Digi Interface

I work there as a PHP Developer and my main work was to develop Admin Panel, Website, Web Applications and Android App API's using Postman.

Projects

107 Days

Easebuzz Integration

We have already Stripe Payment Gateway for UK customers but we did not have any Payment Gateway for Indian Customers. So we needed some payment gateway so that we could sell our existing Food Order product to Indian Restaurants as well.

213 Days

Xero Integration

We had already integrated Xero but there was some other requirements like Day End Report generation.

534 Days

Entrac Petroleum

We have migrated the client's existing website from Joomla Version 3 to Joomla Version 4 by customizing the client's existing Articles and Modules.

31 Days

FOR.ORG

We have customized the Moodle User Registration, Updation, and Deletion APIs as per the client's requirements and implemented Single Sign On in the client's system using the PHP CURL Script.

960 Days

MyCampus

This is an E-Learning platform through which the KT Session will be provided to its users. We have customized the Moodle LMS Theme and Plugins APIs as per the client's requirements and developed its frontend using Angular.

991 Days

Medela

This is an E-Learning platform through which the KT Session will be provided to its users. We have customized the Moodle LMS Theme and Plugins APIs as per the client's requirements and developed its frontend using Angular.

30 Days

Pathology Backend Panel

It was a backend panel for a pathology system. In the panel we can check out how many registration has been done for doing a pathology test. We can also check how many orders have been rescheduled. We can assign a sample collector for each order.

31 Days

### Pathology App Apis

It was an app for a pathology system. In this app we can register ourselves for doing a pathology test and a sample collector will come to our home and will take our blood sample and after that we can check out our blood report progress. This app's apis is developed using the php laravel framework.

30 Days

### Relaxo Stock Management System

It was a backend panel developed using the php codeigniter framework. This panel is used for managing stock details of the relaxo.

31 Days

### Radilogy and Pathology Backend Panel

It was a radiology and pathology project developed using the php codeigniter framework. In this project customers registration will be done for doing radiology and pathology tests.

31 Days

### Library Management System

Library management system is a subscription basis system, where librarian will register the member details and when member will start subscription after then he can take book from library with paying book price and after 15 days he must return book back to the library and can get back his deposit book price.
