Projects

TP-Bazaar (E-Commerce)

Description:

The Online Bazaar project is an ecommerce website that aims to bring together retailers and customers in a seamless online shopping experience. The platform is designed to accommodate three key modules: the administrator, retailer, and customer, each with unique roles and responsibilities.

Technologies: Figma, HTML, CSS, Bootstrap, Ant Design, JavaScript, React.js, Node.js, MySQL, AWS, Docker, Next.js

Role: Frontend(UI Design, validation), Backend(API creation, validation, Authentication, Role Management), Database(Schema Designing).

OWLSEYE

Description:

Owlseye is a groundbreaking and innovative project that offers a comprehensive platform to revolutionize the automotive industry. This cutting-edge platform serves as a bridge connecting individuals, garages, and vehicle owners, simplifying the often complex world of vehicle maintenance and repair services. With a user-friendly and intuitive interface, Owlseye provides a seamless experience for users. It empowers individuals to effortlessly connect with nearby garages, enabling them to book services, track repairs in realtime, and access exclusive special offers. The platform is designed with a singular focus on user convenience, safety, and cost-efficiency, providing an all-in-one solution for all automotive needs.

Technologies: Figma, CSS, HTML, Bootstrap, Material UI, Chakra-UI, JavaScript, React.js, Next.js, Node.js, React Native, AWS Cloud Services, Git, GitHub, Docker.

Role: Frontend (UI/UX Design, validation, API Integration), Backend (API creation, validation), Authentication using JWT, Role Management.
