Jan 2023 - 31 March 2024

Wrocut Technologies

Dynamic associate developer with a proven track record of spear heading internal and client projects, including esteemed collaborations with industry leaders such as HT Media, Chordify, and BuilderAI. Known for delivering results through a combination of technical prowess and innovative problem-solving.

Mar 2022 - Oct 2022

Numeric Infosystem Pvt. Ltd.

During my tenure here as an internship trainee, I actively contributed to an exceptional project that leveraged cutting-edge technologies including React and Node.js. I played a significant role in the development process, utilizing my expertise to seamlessly integrate a robust MySQL server for efficient database management. My dedicated commitment to the project spanned over a successful six-month period, allowing me to make substantial contributions to its overall success.

Projects Worked On:

LOYALTY APP

The Loyalty App is a cutting-edge web application, at its core, the app focuses on delivering a personalized and engaging loyalty program experience. Users can create and manage their profiles, connecting with their favorite retail stores to earn and redeem loyalty points. For added convenience, the Loyalty App has been temporarily deployed on the company server (Private Server). Whether you're a retailer seeking to enhance customer engagement or a shopper looking for exclusive rewards, the Loyalty App delivers a user-centric solution that's scalable and retailer friendly. **Technology used:** React js, Node js

Roles and Responsibilities: For this project I have designed the wire frame and have done development by using React Js and Node Js. All the technical Documentation like preparing functional flows, Design and helped team in deployment on the local server. Have used Postgre SQL database for data storage and maintenance.

Hindustan Times (CIRCULATION READERS)

Worked and collaborated with HT Media Limited on a project as a front end web developer. Have created some functionalities like extracting the token from the url, bug xes ,design some condition rendering elements etc. **Technology used:** React js

Roles and Responsibilities: I have worked on the stories received from the business and worked on fixing the bugs and enhancements on the project. I have worked on Jira for the story tracking and have deployed the task for every release. Have used Git Hub for code Management.

JUPITER

It is a jira like project management system to effectively manage and improve the organization's interactions and relationships with its customers. It is in development phase. I worked on the project Header module which gives information about the currently running project ,about it's team and more, have used Ant design components for designing and sequel for the backend part. **Technology used:** React Js, Ant design

Recipe Hunt

This is the App which create recipes according to the ingredients chosen by the users. Made by using third party API for fetching the data and frontend part is fully made by using React js. **Technology used:** React js
